SWITCH SYSTEMS | **SYSTEM DESIGN**

EVERY ONE A WINNER

SYSTEM DESIGN STRAIGHT LINES AND HIGH QUALITY

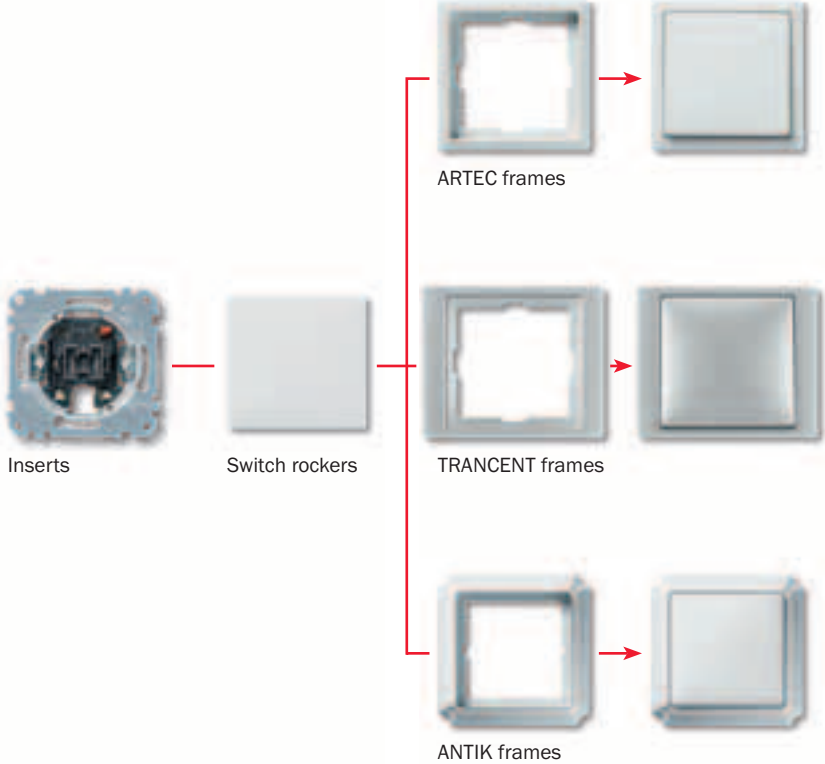

System Design from Merten offers an attractive selection featuring a host of different design touches. Such as the minimalist ARTEC, the exclusive TRANCENT and the classical ANTIK. All covers and central inserts are designed to fit all ranges. So it's easy to cater to individual requirements.

With over 125 functions, the three design variants combine to create a very broad product range.

The system principle

Change the switch range the easy way: The inserts from System Design fit all the different design variants. Just change the frame and it's done.

ARTEC THE FASCINATION OF CLEAN LINES

Groundbreaking in form and design.
ARTEC is already regarded as a classic.
Timeless, clear design and consistent
form.

ANTI-K THE STYLISH ALTERNATIVE

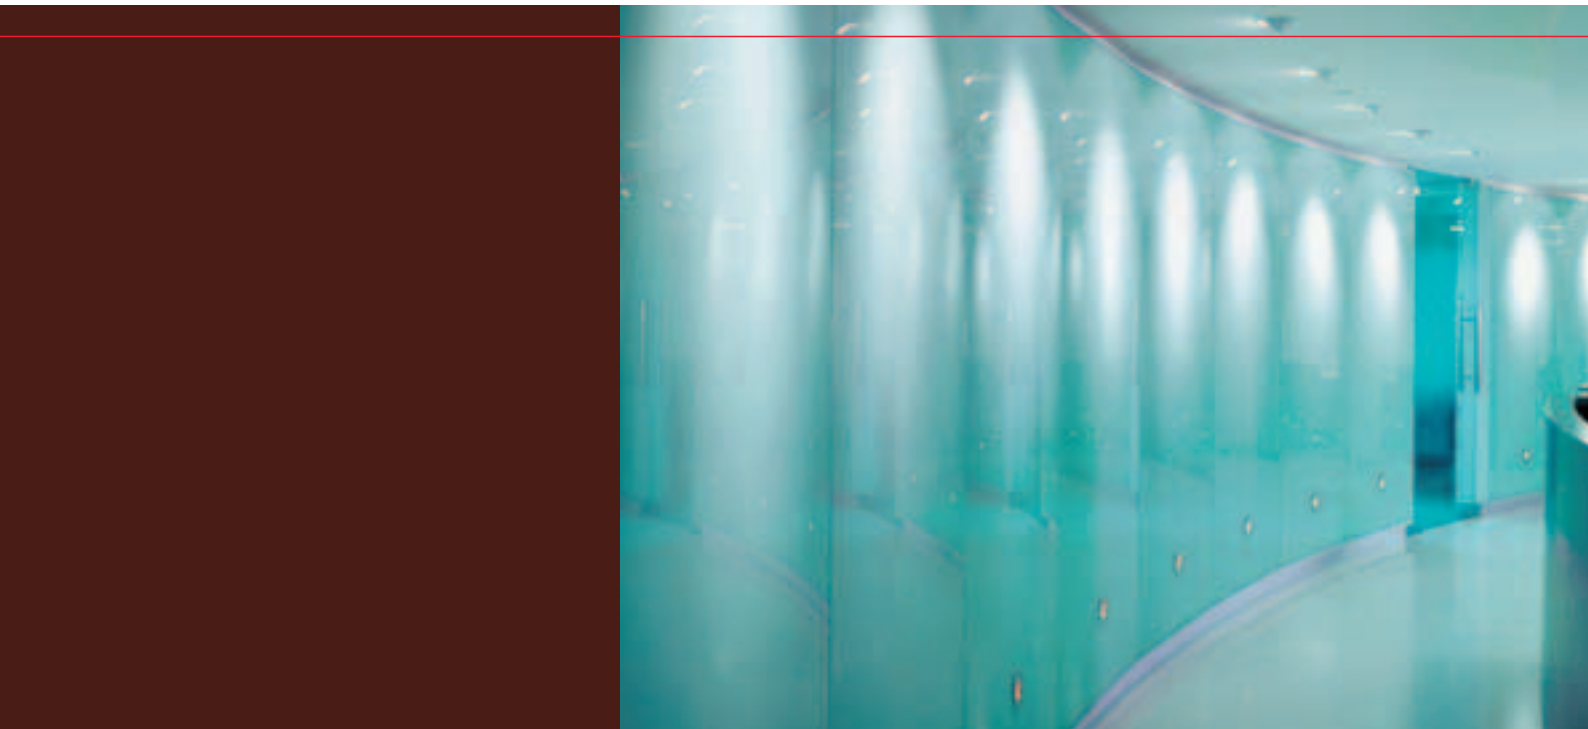

Confident elegance, high-quality materials and a wide range of potential uses - these are the hallmarks of the ANTI-K switch range. It is the range of choice for anyone who values sophistication in domestic interior design.

ANTI-K, antique brass

TRACENT TRANSPARENCY OF FORM AND FUNCTION

TRACENT - the first glass switch in the world - combines the latest technology with highly acclaimed design. The lightest of touches on the glass surface is enough to dim the lights, switch them on and off or control the blinds. TRACENT can be individually labelled and integrated into the intelligent building technology system INSTABUS EIB.
